

TAMUG SMALL BOAT BASIN DESIGN / BUILD PROJECT

Project includes replacement of Texas A&M Galveston's shoreline protection revetments that received damage from Hurricane Ike in 2008, as well as replacement of the floating dock system and installation of a new boat ramp. Turn-key services are being provided to complete the job with landscape improvements and site beautification. Additional services to be provided include pile driving, bulkhead construction, electrical installation and engineering services.

PROJECT SUMMARY

- Shoreline revetments replaced
- Floating dock system replaced and boat ramp installed
- Bulkhead construction
- Concrete pile driving

The above are highlights of recent projects. A more comprehensive list of company projects is available upon request. References for the aforementioned projects, as well as general company, financial, insurance and bonding references are also available upon request.
